

Getting vaccinated is highly recommended!!

【What kinds of effectiveness do the vaccines have?】

① It would prevent having some symptoms such as fever, cough, etc., though you contract COVID-19.	
② It would prevent your condition from getting serious.	

⚠ It is **still unknown** whether the vaccine would prevent contracting COVID-19 or not.

※ Getting vaccinated for COVID-19 costs **¥ 0**.

If you have some questions, please make a call and ask. (They are not toll free.)

① About vaccination coupons, the places to get vaccinated, or how to make a reservation, etc.

Even after you are vaccinated, you should keep taking precautions not to contract COVID-19!

WHY! ?

I contracted COVID-19 though I am vaccinated!

Definite NOs!!

- I had the vaccine injection only for once. (For those people who experienced severe allergic reactions including anaphylaxis after receipt of the 1st dose of COVID-19, they cannot receive the 2nd dose.)
- I no longer wear a mask since I finished receiving the 2nd injection of COVID-19 vaccine.
- We had a party after receipt of the COVID-19 vaccine. We thought we were safe because everyone was fully vaccinated.

Let's follow these things below!

- You need to complete receiving the 2nd dose after the 1st one.
- Even after receipt of COVID-19 vaccines, you need to maintain taking preventive measures.
 - Wear a mask. Wash your hands. Disinfect.
 - Keep your physical distance from others.
 - Don't dine with many people or throw a party/BBQ, etc.

- ⚠ It would take about 2 weeks to earn the effectiveness of the vaccine after receipt of the 2nd dose.
- ⚠ The effectiveness of the vaccine is not a 100%.
