

It's Really Terrifying!

Novel Coronavirus Infection

According to the reports up till now, some people are still suffering from some symptoms (so-called prognostic symptoms) even after the novel coronavirus infection has been cured.

Even some young people complain of prognostic symptoms.

Various "Symptoms"

Tiredness / Lassitude

Difficulty to breathe

Chest pain

Cough

Losing hairs

What is "novel coronavirus infection" ?

It is a viral infection. It infects people by droplets such as spit or touching. After the virus gets inside your body and you have a cold-like symptom, you may feel very unenergetic/tired and hard to breathe and need to be hospitalized. In addition, some people have no symptoms, but it may infect people around them because the virus is inside the body.

Check out the following page not to be infected by novel coronavirus infection.

COVID-19 Infection Prevention Measures

Handwashing

Disinfection

Good Ventilation
