At-Home COVID-19 Diagnostic Test	Antipyretic Analgesic (Fever reducer)
List of government-approved testing kits	<u>List of over-the-counter antipyretic analgesics</u>

When consulting by phone, please write out the following in advance.

- What symptoms have you had since when?
- Did you know someone close to you who had a fever?
- Were you in any of the 3Cs (Closed spaces with poor ventilation, Crowded places, Close Contact situations) conditions?

Consultation Guideline

- One of the following strong symptoms is present: difficulty breathing (dyspnea), intense lethargy (fatigue), high fever, etc.
- The patient is prone to severe illness*Note and has relatively mild cold symptoms such as fever and cough.

Note: Elderly people, people with underlying medical conditions such as diabetes, heart failure, or respiratory disease (including Chronic Obstructive Pulmonary Disease), people undergoing dialysis, or people using immunosuppressive drugs or anti-cancer drugs.

- Other than those above, relatively mild cold symptoms such as fever and cough <u>lasting</u>
 4 days or longer.
 - If symptoms persist for 4 days (or more), be sure to consult with your health care provider.
 - Symptoms vary from person to person, so if you think the symptoms are strong, consult immediately. The same applies to those who must continue to take antipyretics or other medications.
